Spiders

- **Spiders are beneficial additions to your outdoor space. Since they eat insects and other pests, we don't usually recommend getting rid of them. If you need to manage their populations, natural biological controls, essential oils, and exclusion tactics can help.**
- To get rid of spiders inside, use spider traps or repellents like peppermint oil and vinegar. Basic home hygiene, like removing spider webs, installing screens, cleaning up messes, and removing clutter can also help.

Spider Life Cycle

Here are our top tips to remove spiders immediately (In Your House or Apartment)

- Set spider traps
- Remove webs
- Use peppermint oil
- Use vinegar
- Install screens
- Rethink your storage
- Use store-bought insecticide
- Keep a tidy home or apartment.
- Use a spider catcher
- Clean up leftovers
- Remove clutter

Repelling Spiders

- Reduce lighting around the home (light attracts insects, which in turn attract spiders)
- Caulk all entries
- In case of infestation, a technician will apply a spider extermination treatment on the outer surfaces of your home
- Examine plants, firewood and areas around the patio to avoid bringing spiders inside
